

Presenter Name: \_\_\_\_\_

Location: 260

Students will

How blood vessels function and how what is inside it can repair the vessel itself.  
What is inside of a cell and the processes of how structures will interact with each other.

Explain what the blood vessel contains  
Explain what is inside of a cell and what each of these structures does.  
Explain what DNA, RNA, Kinsen, and other proteins interact with each cellular structure.  
Explain the process of how white blood cells and antibodies do to protect our cells.

### **Assessment**

Students will be asked to complete a quick evaluation after the workshop so we can continue to improve our services.
